

- Fatty acid degradation
- Valine, leucine and isoleucine degradation
- regulated exocytosis
- multicellular organismal homeostasis
- ABC transporters
- response to alcohol
- Adherens junction
- peptidyl-tyrosine autophosphorylation
- regulation of lipid metabolic process
- response to xenobiotic stimulus
- response to antibiotic
- muscle contraction
- regulation of body fluid levels
- temperature homeostasis
- activation of adenylate cyclase activity
- Tryptophan metabolism
- intracellular lipid transport
- regulation of vesicle-mediated transport
- cellular response to organonitrogen compound
- regulation of hormone levels
